Dhruv Mulani

CYBERSECURITY RESEARCHER · VAPT · SECURITY AUTOMATION

Email: dhruvmulani.work@gmail.com | **Location:** Ahmedabad, India | **LinkedIn:** linkedin.com/in/dhruv-mulani | **GitHub:** github.com/dhruv-mulani | **TryHackMe:** Boss.Hack3r (Top 3%)

PROFILE SUMMARY

Offensive cybersecurity practitioner specializing in vulnerability research, penetration testing (VAPT), digital forensics, and security automation. Experienced in discovering high-impact business logic and financial tampering flaws through responsible disclosure, developing AI-assisted offensive security tools, and solving national-tier CTF challenges across binary exploitation, web, and network forensics.

WORK EXPERIENCE

Cyber Octet — Cybersecurity Intern (VAPT) — Nov 2025 – Nov 2026 `1 YEAR` · Ahmedabad, Gujarat

- Executed vulnerability assessments and penetration tests across client web applications and system perimeters following OWASP testing guidelines.
- Conducted targeted reconnaissance, service enumeration, and vulnerability analysis using Burp Suite, Nmap, and custom Python automation scripts.
- Triaged security findings and delivered detailed technical vulnerability reports with step-by-step remediation guidance to development teams.

SarthiBus — Bug Hunter (Vulnerability Research) — Aug 2025 – Dec 2025 `5 MONTHS` · Surat

- Discovered and responsibly disclosed a critical financial tampering vulnerability in the platform's core ticketing transaction logic.
- Collaborated directly with engineering leads to validate proof-of-concept, test patch implementations, and enforce server-side validation.
- Awarded an official **Certificate of Appreciation** from company leadership for outstanding contributions to platform security.

CodTech — Cybersecurity & Ethical Hacking Intern — Jan 2025 – Mar 2025 `3 MONTHS` · Ahmedabad

- Engineered an automated real-time file integrity monitoring (FIM) daemon in Python to detect unauthorized filesystem modifications and tampering.
- Conducted API security audits, testing endpoints for broken object level authorization (BOLA) and parameter manipulation flaws.
- Implemented automated alert dispatchers for suspicious system modifications and anomalous server activity.

ACHIEVEMENTS & CTF HONORS

4th Place: **Zero Trace CTF 2026** — 18 Solves (Web, Pwn, Crypto, Forensics, OSINT) · Writeup Repo

610/680 Pts: **KPMG CTF 2026** (Campus Edition) — 33 Walkthroughs across 10 categories, 31 flags · Writeup Repo

Winner: **Cyber Shadez'26 National TechFest** — 1st Place in Bug Bounty Category

14th Place: **ISEA-ISAP CTF'26** organized by IIT Madras — 1,613 Points earned

Top 3%: **TryHackMe Global Standing** — Active Directory compromise, lateral movement & privilege escalation

Honored: **Certificate of Appreciation** — SarthiBus (Responsible disclosure of critical financial flaw)

TECHNICAL SKILLS & CERTIFICATIONS

Offensive Security & VAPT: Web & API Penetration Testing, OWASP Top 10, Red Teaming, Bug Bounty, Reconnaissance, Vulnerability Assessment, Exploit Automation.

Tools & Frameworks: Burp Suite, Nmap, Metasploit, SQLMap, Nessus, Wireshark, Docker, Linux/Kali, Git, Cloudflare Tunnels.

Languages & Scripting: Python, Bash Scripting, C, C++, JavaScript, HTML/CSS, SQL.

Certifications & Credentials: Belkasoft Windows Forensics (Certified), Belkasoft Advanced Forensics (Certified), IIT Bombay Cybersecurity Workshop, TryHackMe Credential.

CTF & Competitions: CybershadezCTF, VishvaCTF, Hack The Box, AsurCTF, DoomsplayCTF, NeuraCode AI Sprint, THM Hackfinity.

Digital Forensics & OSINT: Memory analysis, Windows artifact analysis, IMINT, network packet dissection.

KEY PROJECTS & SECURITY TOOLING

LOGify — Unified Log Management & Security Analysis System — `Python · CLI · Cloud Observability`

- Built an automated log management platform combining an efficient Python CLI collector agent with a central cloud dashboard for real-time anomaly detection.

THM-AutoFlow — Automated Challenge & Request Orchestration Framework — `Python · Requests · CLI Automation`

- Developed a Python automation framework for CTF session management, structured challenge interaction, and API-driven task execution.

CryptaVault & OOB-Tunnels — Post-Quantum Cryptography & Adversarial Infra — `TypeScript · Shell · Kyber/Dilithium`

- Engineered zero-knowledge post-quantum encryption storage (Kyber/Dilithium) and dual-tunnel Cloudflare/ngrok OOB callback infrastructure.

EDUCATION

Bachelor of Engineering in Computer Engineering (Final Year) — 2023 – 2027

Institute of Infrastructure, Technology, Research, and Management (IITRAM) · Ahmedabad, India
